According to our (Global Info Research) latest study, the global Aircraft Solid Propulsion market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A Aircraft Solid Propulsion is a rocket thruster that is strapped to an aerospace vehicle to provide additional thrust. Solid boosters are used on the Ariane V, the Dyna-Sky V and the US Space Shuttle. The solid thrusters used on the Shuttle are the most powerful of these thrusters. The advantage of solid thrusters over liquid thrusters is that they have a higher thrust capacity and do not require cooling and insulating equipment.
