Abstracts

The global Aircraft Solid Propulsion market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Aircraft Solid Propulsion is a rocket thruster that is strapped to an aerospace vehicle to provide additional thrust. Solid boosters are used on the Ariane V, the Dyna-Sky V and the US Space Shuttle. The solid thrusters used on the Shuttle are the most powerful of these thrusters. The advantage of solid thrusters over liquid thrusters is that they have a higher thrust capacity and do not require cooling and insulating equipment.

This report studies the global Aircraft Solid Propulsion production, demand, key manufacturers, and key regions.
