According to our (Global Info Research) latest study, the global Aircraft Tire Retreading market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Many aircraft tires that become injured in service can be successfully repaired. Tires of which the treads are worn out, flat spotted, or otherwise damaged, but of which the cord body is intact, can be retreaded. Retreading and repairing aircraft tires has been a common practice for many years and can save aircraft operators considerable sums of money. Tires that might otherwise have been discarded due to insufficient or damaged tread can be retreaded or repaired for continued service, at a cost much lower than that of a new tire. Retreading and repairing extends the service life of a carcass several times past initial new tire usage.
