The global Aircraft Wheels market size is expected to reach \$ 87.27 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Aircraft wheels are an important component of a landing gear system. With tires mounted upon them, they support the entire weight of the aircraft during taxi, takeoff, and landing. The typical aircraft wheel is lightweight, strong, and made from aluminum alloy. Some magnesium alloy wheels also exist. Early aircraft wheels were of single piece construction, much the same as the modern automobile wheel. As aircraft tires were improved for the purpose they serve, they were made stiffer to better absorb the forces of landing without blowing out or separating from the rim. Stretching such a tire over a single piece wheel rim was not possible. A two-piece wheel was developed. Early two-piece aircraft wheels were essentially one-piece wheels with a removable rim to allow mounting access for the tire. These are still found on older aircraft. Later, wheels with two nearly symmetrical halves were developed. Nearly all modern aircraft wheels are of this two piece construction.

Safran, UTC, Meggitt, Honeywell and Parker Hannifin are the leaders of the Aircraft Wheels industry, which take about 75% market share. Asia Pacific is the major region of the global market, which takes about 35% market share.
