Airfield Ground Lighting (AGL) products are specialized lighting systems installed at airports and helipads to facilitate safe and efficient aircraft operations during nighttime or low-visibility conditions. These lighting products include runway lights, taxiway lights, approach lights, and apron lights, among others. Runway edge lights and threshold lights mark the boundaries and ends of runways, guiding pilots during takeoff and landing. Taxiway lights help aircraft navigate between runways, terminals, and parking areas. Approach lighting systems assist pilots in aligning with the runway during final approach, while apron lights illuminate aircraft parking and service areas. AGL products are designed to meet stringent international standards for visibility, durability, and reliability, ensuring safe operations for both commercial and general aviation traffic at airports worldwide.
