According to our (Global Info Research) latest study, the global Airgel Insulation Board market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Airgel insulation board, also known as aerogel insulation board, is a type of thermal insulation material that utilizes a highly porous and lightweight material called aerogel. Aerogel is often referred to as "frozen smoke" due to its extremely low density and high porosity. Airgel insulation boards are made by impregnating a silica-based aerogel into a fibrous matrix, such as fiberglass or cellulose fibers, and then compressing it into a rigid board form. The result is a lightweight, low-density board with exceptional thermal insulation properties. Aerogels have extremely low thermal conductivity, which means they are highly effective at reducing heat transfer. Airgel insulation boards provide excellent insulation by minimizing heat flow through conduction, convection, and radiation. This makes them ideal for applications where high thermal resistance is required, such as in building insulation, HVAC systems, industrial equipment, and aerospace technologies.
