Abstracts

Airplane tires refer to pneumatic tires used in aviation flight equipment. Such tires require high impact strength and low heat build-up. The rubber materials used in the manufacture of aviation tires must ensure that their performance meets the specified indicators after 24 hours under the harsh conditions of -40°C and 71°C. The burst pressure of the tire is more than 4 times higher than the rated internal pressure. The static charge generated by the tires during take-off and landing of the airplane must be evenly transmitted to the ground.
