Digitalization is a subject undergoing intense study these days. Whether it is cloud and mobile computing, the Internet of Things or block chain technologies, the development of digital technologies provides huge potential to new businesses and significant adjustments to classic businesses. The aviation industry is no exception to this with focus moving away from innovative aircraft or ambitious infrastructure projects to an emphasis on creating full digital airports. These modern digital hubs are popularly referred as Airports 4.0.

Airports face continuous demands to streamline operations and cut expenses. Integrating Airport 4.0 technologies like AI analytics, autonomous systems, and predictive maintenance can enhance operational effectiveness while decreasing downtime. IoT sensors power predictive maintenance that picks up on potential equipment failures before any breakdowns, cutting repair costs significantly while forestalling disruptions altogether. Additionally, automation cuts the need for human labour just so often, resulting in augmented productivity and lower operating expenditures overall. This factor is boosting the market growth and development.
