## Abstracts

The global Airport Anti-Drone Solutions market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to aviation experts, the danger posed by drones is real. The catastrophic damage caused when a drone collides with an airplane or when a terror organization uses armed drones presents a clear security threat to airports. At the same time, the risk of a drone incident occurring is increasing because the number of remote-controlled drones for private use, including video-equipped aerial vehicles, is now at an all-time high. Without a clear protocol or appropriate technology in place, airports are vulnerable to future costly disruptions, safety incidents, and potential security breaches.

Airport drone defense systems are an effective, powerful, customizable solution to mitigating the risk of collisions with aircraft and other undesirable drone activity.
