Abstracts

According to our (Global Info Research) latest study, the global Airport BHS and HBS market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The airport baggage handling system (BHS) and hold baggage screening (HBS) are two different but interrelated important parts of the airport. Together they form an efficient baggage management system. Currently, Siemens has the world's most advanced baggage handling system (BHS): a processing capacity of 19,200 pieces of baggage per hour, a total length of 68 kilometers of conveyor belts, and a 40 kilometers per hour high-speed system, which can quickly transfer baggage to all parts of the airport. Daifuku Airport Technologies provides baggage handling systems, operations and maintenance, passenger security lanes and airport operations systems.

BHS is an automated system specifically used for airport baggage transfer, sorting, loading and unloading. The purpose is to ensure that passengers' baggage reaches its destination on time and will not be lost or damaged. HBS is a system for checking the security of checked baggage at airports to prevent the carriage of dangerous items and contraband. BHS and HBS are two closely related parts of the airport, and they are usually integrated into a comprehensive baggage management system. The airport baggage handling system (BHS) and checked baggage inspection (HBS) are two important parts of the airport. Together they constitute the airport's baggage management system, improve the safety and efficiency of baggage handling, and provide better services to passengers.
