Abstracts

The global Airport Infrastructure Electrification market size is expected to reach \$ 7349 million by 2032, rising at a market growth of 7.3% CAGR during the forecast period (2026-2032).

Airport infrastructure electrification refers to the systematic transformation and upgrading of airport ground support equipment, vehicles, and supporting systems by replacing traditional fossil fuels with electricity. Its core objective is to reduce the aviation industry's ground-based carbon emissions, noise pollution, and dependence on fuel. Key components include: the widespread adoption of electric ground support vehicles, such as shuttle buses, passenger boarding stairs, baggage tractors, and aircraft tow trucks; the construction of high-power charging networks and hangar charging facilities; and supporting airport microgrids, energy storage systems, and smart energy dispatch platforms. Through electrification, airports can significantly improve energy efficiency and operational environmental friendliness, representing a key technological pathway to achieving carbon-neutral airports and green aviation hubs.
