Abstracts

The global Airport Operations and Management Systems market size is expected to reach \$ 7775 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Airport Operations and Management Systems (AOMS) are comprehensive software platforms used for daily airport operations, flight support, resource allocation, airside and landside coordination, passenger information dissemination, ground service coordination, operations control, and performance monitoring. Core modules typically include AODB (Airport Operational Database), RMS (Resource Management System), FIDS (Flight Information Display System), A-CDM (Airport Collaborative Decision Making), flight schedule management, gate/boarding gate/check-in counter/baggage carousel allocation, apron and airside operations management, emergency and incident management, and the Airport Operations Control Center (AOCC) platform.

In the past, airports primarily relied on independent systems such as AODB, FIDS, and RMS. The future emphasis will shift to AOCC integration, A-CDM collaboration, real-time data exchange, predictive resource scheduling, and cross-entity collaborative operations. With the recovery of global air passenger traffic, airport capacity constraints, and increased pressure on flight punctuality, airports need to improve the utilization rate of gates, boarding gates, check-in counters, baggage carousels, jet bridges, and ground service resources through digital systems. AI, digital twins, cloud deployment, mobile operations management, and data platforms are becoming important directions for next-generation airport systems. Large hub airports focus on complex operational collaboration, while smaller airports prefer cloud-based, modular, and low-maintenance-cost solutions.

This report studies the global Airport Operations and Management Systems demand, key companies, and key regions.
