## Abstracts

The global Airport Outsourcing Service market size is expected to reach \$ 23684 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Airport outsourcing refers to a resource integration management model where airport management agencies, in order to improve operational efficiency and focus on core businesses, entrust the management and operation of non-core or some core businesses to external professional third-party service providers through contracts. This model separates ownership and management rights of business resources, allowing airports to 'let professionals do what they do best,' transforming from a direct operation model to a management model, thereby optimizing resource allocation, controlling costs, and improving overall service quality and core competitiveness.

The airport outsourcing service market has broad prospects and is currently undergoing a period of continuous growth and profound transformation. The rapid recovery of global air travel and the continuous increase in passenger traffic are forcing airport operators to improve service quality while controlling costs, which constitutes the core driving force of the outsourcing market. In the future, market development will deeply integrate the three major trends of digitalization, intelligentization, and green development. The scope of outsourcing services will expand from traditional ground services, cleaning, and security to emerging fields such as information technology management, biometric-based passenger flow management, data analysis platforms, and even sustainable development projects, creating numerous opportunities for professional service providers.
