Abstracts

According to our (Global Info Research) latest study, the global Airport Runway Status Lighting System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The main components of the runway status light system include runway entry lights (REL) and takeoff holding lights (THL), which convey specific information through different colors and on and off states of the lights. For example, when the REL is activated and lights up (usually red), it means that the runway is occupied by other aircraft or vehicles, and it is not safe to enter or cross the runway at this time. The lighting of THL sends information to aircraft waiting for takeoff or ready for takeoff, indicating that it is not safe to take off at this time because the runway is or will be occupied by another aircraft or ground vehicle.
