Resuscitation equipment is also commonly referred to as a resuscitation device. It is a type of equipment that uses machinery instead of humans to perform basic life support operations such as artificial breathing (mechanical ventilation) and chest compressions. The resuscitation equipment market is segmented into external defibrillators, airway management equipment, convective warm blankets and other resuscitation equipment. Such devices can provide high levels of uninterrupted artificial circulation and ventilation support. The airway management equipment market dominates this market due to factors such as the high incidence of COPD and a large number of asthma and bronchitis cases.
