According to our (Global Info Research) latest study, the global AI-Powered Fitness Machine market size was valued at US\$ 3735 million in 2025 and is forecast to a readjusted size of US\$ 7838 million by 2032 with a CAGR of 11.1% during review period.

AI-Powered Fitness Machines refer to fitness equipment that integrates advanced electronic sensing, networking, data analysis, and user interaction technologies into traditional fitness equipment. This enables exercise data monitoring, intelligent feedback, personalized training program recommendations, and cloud services. Typical equipment includes networked treadmills, smart exercise bikes, smart strength trainers, interactive training mirrors, and AI coaching systems. Their core feature is interaction with users through IoT, AI, or applications, making the exercise process more precise, motivating, and personalized. These devices are widely used in homes, personal workouts, rehabilitation training, and smart fitness spaces. In 2025, the global production of AI-Powered Fitness Machines was approximately 3.98 million units, with an average price ranging from \$500 to \$3,000 and a gross profit margin of approximately 30% to 45%.

The smart fitness equipment market is steadily expanding globally, primarily driven by factors including increased health awareness, the widespread adoption of smart connectivity technologies, and the continued growth in demand for home fitness. Consumers are increasingly valuing personalized training experiences, real-time data feedback, and remote interactive courses, which has fueled the rapid adoption of smart devices such as connected treadmills, smart bikes, and AI coaching systems. Currently, smart devices are not only serving as home fitness aids but are also gradually

integrating into the digital health ecosystem, working in conjunction with wearable devices, fitness apps, and coaching platforms. Regarding market challenges, smart fitness equipment is typically priced significantly higher than traditional mechanical products, posing a barrier to price-sensitive consumers. Simultaneously, some devices require additional fees for content services (such as premium course subscriptions), impacting user retention. Supply chain fluctuations and price volatility in key components like chips and sensors may also put pressure on shipping costs. Downstream demand trends are diversifying. On one hand, home fitness remains the primary growth engine for smart devices, especially among households in core cities in Europe, America, and Asia. On the other hand, interactive devices combining virtual courses and AI-powered personalized training programs are attracting younger consumers. Smart fitness equipment for rehabilitation training and preventative healthcare is also beginning to create niche growth opportunities, driving steady overall growth in sales of strength training equipment and assistive devices.
