## Abstracts

The global Al-Ti Master Alloy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The grain refinement of aluminum by addition of Al-Ti and Al-Ti-B master alloys has been widely used and studied in recent years. Much practical and theoretical work has been done to investigate a more effective Al-Ti-B master alloy, while Al-Ti has often been considered as more simple and understandable master alloy. In certain areas, Al-Ti master alloys have been used extensively as an alternative to Al-Ti-B grain refiner.  $TiAl_3$  particle in Al-Ti grain refiner is a more powerful nucleant for  $\alpha$ -Al than any other heterogeneous nucleating particle
