According to our (Global Info Research) latest study, the global Albendazole market size was valued at USD 163.7 million in 2023 and is forecast to a readjusted size of USD 271 million by 2030 with a CAGR of 7.5% during review period.

Albendazole is a high-efficiency and low-toxic broad-spectrum anthelmintic drug. It was successfully developed and marketed by Skipper in the 1980s. It can be used clinically to ward off roundworms, pinworms, tapeworms, whipworms, hookworms, and anastomosis. After being metabolized to sulfoxides or sulfones in the body, it inhibits the parasite's absorption of glucose, leading to depletion of the body's glycogen, or inhibits the fumarate reductase system, hinders the production of ATP, and makes the parasite unable to survive and reproduce. Albendazole is a benzimidazole derivative, which is rapidly metabolized into sulfoxide, sulfone alcohol and 2-aminosulfone alcohol in the body, selectively and irreversibly inhibits the cytoplasmic microtubule system of intestinal wall cells of parasites Polymerization, blocking its uptake of various nutrients and glucose, leading to depletion of endogenous glycogen, and inhibiting the fumarate reductase system, preventing the production of adenosine triphosphate, making the worm unable to survive and reproduce. Similar to mebendazole, albendazole can also cause the degeneration of cytoplasmic microtubules in the intestinal cells of worms and bind to its tubulin, causing intracellular transport blockage, resulting in the accumulation of secretory particles in the Golgi body, the cytoplasm is gradually dissolved, and the cells are completely absorbed Denaturation causes death of the worm. Albendazole completely kills hookworm eggs and whipworm eggs and partially kills roundworm eggs. In addition to killing and repelling various nematodes parasitic in animals, it also has obvious killing and repelling effects on tapeworms and cysticercosis.

This is a relatively concentrated market, mainly due to the particularity of the

pharmaceutical industry, where there are higher operating licenses and barriers, technical barriers, capital barriers and environmental barriers, so the concentration is higher. From the perspective of the global market, the original research firm GSK's albendazole accounts for more than 40% of the entire industry and is the leading enterprise in the albendazole industry. From the perspective of the Chinese market, the market concentration is also relatively high. The main companies are Huazhong Pharmaceutical and Jiangsu Qihui, which together account for 70% of the domestic market.
