Abstracts

Albumin is a water soluble globular protein produced in the liver. It accounts for 50% of blood plasma proteins. These play a vital role in regulating blood volume and act as transporters for molecules such as few hormones, bile salts, and ions. Albumin is commonly used as blood volumizer in rare diseases, burns, shocks, liver conditions, and other blood loss trauma and surgeries

Scope of the Report:

This report focuses on the Albumin (as Excipient) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Increase in usage of albumin as multifunctional excipient, shift toward usage of recombinant albumin, and grant of regulatory approvals are the key factors driving the market. However, high cost and expertise required to set up production plants and stringent regulatory criteria restrain the market. Emerging markets such as India, China, Brazil, and South Africa present significant opportunities in the albumin as an excipient market owing to growing contract research manufacturing.

The worldwide market for Albumin (as Excipient) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
