According to our (Global Info Research) latest study, the global ALCAM(Activated Leukocyte Cell Adhesion Molecule) ELISA Kit market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

ALCAM ELISA Kit is an experimental tool for detecting the concentration of ALCAM (Activated Leukocyte Cell Adhesion Molecule) in human serum, blood or body fluids. ALCAM is a detailed cell membrane appendage that is widely expressed on the cell surface and is present in a variety of cell types, including leukocytes, vascular endothelial cells, and a variety of adipocytes. ALCAM is involved in a variety of physiological and pathological processes, such as cell attachment, cell migration, and the measurement of ALCAM concentration can be used to analyze and evaluate different types of activities, detail cell attachment, migration and invasion and other biological processes. The experimental tool uses alcohol-linked immunosorbent assay (ELISA) technology to calculate the concentration of ALCAM in the formula through a standard curve. This tool has important applications in clinical and laboratory research.
