Abstracts

Alcohol and drug testing equipment are used to test intoxication levels caused by alcohol and drug consumption. Breathalyzers, urine testing devices, oral testing devices, and hair testing devices, immunoassay analyzers, and chromatography instruments are widely used for testing alcohol and drug content in people.

Scope of the Report:

Alcohol abuse and drug abuse represent a significant danger to society. Most users represent that the choice to be a user is a personal choice, but this is not the case. The reality is that drug and alcohol users kill people as they get behind a wheel and drive and as they let anger boil over into killing rage.

Not all users are killers surely, but there is a need for society to control abuse for the common good. These controls are likely to be put more in place going forward as the dangers are more commonly recognized and as the ability to detect users becomes more available at an affordable price.

The worldwide market for Alcohol Breathalyzer and Drug Testing is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
