## Abstracts

According to our (Global Info Research) latest study, the global Alcolock market size was valued at US\$ 1245 million in 2025 and is forecast to a readjusted size of US\$ 1821 million by 2032 with a CAGR of 5.6% during review period.

Alcolock, also known as an 'alcohol-sensitive ignition interlock device,' is a device installed in a car's ignition system to prevent the driver from starting the car if their blood alcohol concentration exceeds the safe limit. This device is designed to prevent repeat offenses by individuals with a history of drunk driving. The alcohol interlock requires the driver to take a breathalyzer test before starting the car. If the test result exceeds the safe level, the control box within the alcohol interlock will send a signal to the vehicle, preventing it from starting. In 2025, global Alcolock production reached 3.388 million units, with an average selling price of US\$357.14 per unit and a gross profit margin of approximately 20%. Major global production capacity is concentrated in North America and Europe (where stringent regulations drive large production and service volumes), while production capacity and installation scale in the Asia-Pacific and Latin American markets are gradually increasing in response to rising road safety requirements.
