Abstracts

ALD systems is a versatile research deposition tool for thermal or energy enhanced ALD. Atomic layer deposition (ALD) is a thin-film deposition technique based on the sequential use of a gas-phase chemical process; it is a subclass of chemical vapour deposition. The majority of ALD reactions use two chemicals called precursors (also called 'reactants'). These precursors react with the surface of a material one at a time in a sequential, self-limiting, manner. A thin film is slowly deposited through repeated exposure to separate precursors. ALD is a key process in fabricating semiconductor devices, and part of the set of tools for synthesising nanomaterials.

According to our (Global Info Research) latest study, the global ALD Systems market size was valued at USD 1923.4 million in 2022 and is forecast to a readjusted size of USD 3105.2 million by 2029 with a CAGR of 7.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Global key ALD systems manufacturers include ASM International, Tokyo Electron etc. The top 3 companies hold a share about 70%. Asia-Pacific is the largest market, with a share about 60%, followed by North America and Europe with the share about 20% and 15%.
