## Abstracts

According to our (Global Info Research) latest study, the global ALD Systems market size was valued at USD 2219.4 million in 2023 and is forecast to a readjusted size of USD 3628 million by 2030 with a CAGR of 7.3% during review period.

ALD systems is a versatile research deposition tool for thermal or energy enhanced ALD. Atomic layer deposition (ALD) is a thin-film deposition technique based on the sequential use of a gas-phase chemical process; it is a subclass of chemical vapour deposition. The majority of ALD reactions use two chemicals called precursors (also called 'reactants'). These precursors react with the surface of a material one at a time in a sequential, self-limiting, manner. A thin film is slowly deposited through repeated exposure to separate precursors. ALD is a key process in fabricating semiconductor devices, and part of the set of tools for synthesising nanomaterials.

Global key ALD systems manufacturers include ASM International, Tokyo Electron etc. The top 3 companies hold a share about 70%. Asia-Pacific is the largest market, with a share about 60%, followed by North America and Europe with the share about 20% and 15%.
