## Abstracts

The global ALD Systems market size is expected to reach \$ 3105.2 million by 2029, rising at a market growth of 7.1% CAGR during the forecast period (2023-2029).

Global key ALD systems manufacturers include ASM International, Tokyo Electron etc. The top 3 companies hold a share about 70%. Asia-Pacific is the largest market, with a share about 60%, followed by North America and Europe with the share about 20% and 15%.

In China market, in terms of product type, Industrial Production Equipment is the largest segment, occupied for a share of about 84%, and in terms of application, Semiconductors and Integrated Circuits has a share about 65 percent. Chinese key players of ALD Systems include ASM International and Tokyo Electron, etc. The top two players hold a share over 50%.

ALD systems is a versatile research deposition tool for thermal or energy enhanced ALD. Atomic layer deposition (ALD) is a thin-film deposition technique based on the sequential use of a gas-phase chemical process; it is a subclass of chemical vapour deposition. The majority of ALD reactions use two chemicals called precursors (also called 'reactants'). These precursors react with the surface of a material one at a time in a sequential, self-limiting, manner. A thin film is slowly deposited through repeated exposure to separate precursors. ALD is a key process in fabricating semiconductor devices, and part of the set of tools for synthesising nanomaterials.
