Abstracts

According to our (Global Info Research) latest study, the global ALD Valve market size was valued at US\$ 741 million in 2025 and is forecast to a readjusted size of US\$ 1302 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global ALD Valve production reached approximately 257,143 units, with an average global market price of around USD 2,800 per unit.

The gross profit margin of major companies in the industry is between 28.46%?52.35%.

In 2025, the global production capacity of ALD Valve was approximately 338,346 units.

ALD Valve is a high-performance process valve used in atomic layer deposition systems to control rapid, precise and repeatable delivery of precursor gases, purge gases and reactive chemicals. It must withstand corrosive chemistries, high cycle frequency, vacuum conditions, particle control requirements and strict sealing performance. The product is used in semiconductor wafer fabrication, compound semiconductors, displays, MEMS, photovoltaics and advanced coating processes. The market includes fast ALD pulse valves, diaphragm valves and precursor delivery valves for ALD tools, but excludes ordinary industrial valves and general gas regulators.

The industry chain includes stainless steel, specialty alloys, diaphragms, seals, actuators, solenoids, surface coatings, precision machined parts, cleanroom assembly materials and leak testing equipment. Midstream production covers valve design, precision machining, surface finishing, cleaning, assembly, actuation testing, leak testing, particle control and qualification. Downstream demand comes from ALD equipment, semiconductor fabs, advanced packaging, display manufacturing, MEMS

fabrication and specialty coating lines. Growth is driven by advanced process nodes, more ALD steps, high-k materials, 3D structures and stricter contamination control.
