Abstracts

The global Algae Photobioreactor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Algae bioreactors are used to grow microalgae or macroalgae. Algae can be used for biomass production (e.g. seaweed incubators), wastewater treatment, CO₂ fixation or aquarium/pond filtration in the form of algae scrubbers. Algae bioreactor designs vary widely and fall into two broad categories: open reactors and closed reactors. Open reactors are exposed to the atmosphere, while closed reactors (often called photobioreactors) are isolated from the atmosphere to varying degrees.

This report studies the global Algae Photobioreactor production, demand, key manufacturers, and key regions.
