Abstracts

Algae is one of the simplest and abundant forms of plant life, ranging from single cell microalgae to largest seaweeds. Algae produce products like biodiesel, protein, fats, carbohydrate and other. Algae contain 10% to 50% of protein depending upon their sizes. Chlorella, type of algae, contains 58g of protein in 100g of it. Due to high protein content, algal protein is gaining preference as a plant protein alternative. Algal protein is rich in vitamins, minerals, and carotenoids that help the cells from damage. Algal protein boosts the immune system, improve digestion, reduce fatigue, build endurance, acts as the detoxifier, boosts energy levels, controls appetite, improves cardiovascular function, reduces inflammation and allergies and helps in better functioning of liver and kidneys. Algae protein contains omega-3 fatty acids which prevent several diseases like atherosclerosis, thrombosis, arthritis, cancers, etc. The omega-3 fatty acids include Docosahexaenoic acid (DHA) and Eicosapentaenoic acid (EPA). Algae contain protein with essential amino acids, which is involved in the metabolic processes like enzyme production. Hence, high demand is observed for algae products from the food & feed industry in the market.

SCOPE OF THE REPORT:

This report focuses on the Algal Protein in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Demand for protein globally is driven by socio-economic changes such as rising incomes, increased urbanization, and aging populations whereby the contribution of protein to healthy aging is increasingly recognized and recognition of the role of protein in a healthy diet. Economic development and increased urbanization are leading to major transitions in population-level dietary patterns in low and middle-income countries

in particular, such that most of the global increases in demand for foods of animal origin are seen in developing countries.

The algae production requires a high-level of sterility, which also makes it an expensive procedure. Another cause of concern is that its intake as a dietary supplement may lead to indigestion or allergic reactions in humans.

The worldwide market for Algal Protein is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
