Abstracts

The global Aliphatic Dicarboxylic Acid market size is expected to reach \$ 9473 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Aliphatic dicarboxylic acids are a class of organic compounds containing two carboxyl ($-\text{COOH}$) functional groups attached to an aliphatic (non-aromatic) carbon chain, typically including products such as adipic acid, sebacic acid, succinic acid, and glutaric acid; they serve as key intermediates in polymers (especially nylon, polyesters), coatings, plasticizers, lubricants, and specialty chemicals. The supply chain starts upstream with petrochemical or bio-based feedstocks (e.g., cyclohexane, butadiene, paraffins, or renewable sugars and fatty acids), followed by core production processes such as oxidation (e.g., nitric acid oxidation for adipic acid), fermentation (bio-succinic acid), or cracking/synthesis routes; midstream involves purification, crystallization, and grading into industrial, polymer-grade, or high-purity forms; downstream, these acids are converted into derivatives like polyamides (nylon 6,6), polyesters, polyurethane intermediates, plasticizers, and resins, which are then supplied to end-use industries including automotive, textiles, packaging, electronics, and construction, with global trade flows dominated by large integrated chemical producers and increasing diversification toward bio-based and low-carbon production routes. In 2025, global Aliphatic Dicarboxylic Acid output was about 4 million tons with 5 million tons of capacity, average prices of USD 1,300–2,500 per ton, and gross margins around 22%.
