## Abstracts

According to our (Global Info Research) latest study, the global Aliphatic Epoxy Resin market size was valued at US\$ 3960 million in 2025 and is forecast to a readjusted size of US\$ 6181 million by 2032 with a CAGR of 6.5% during review period.

Aliphatic Epoxy Resin is a class of epoxy polymers derived from aliphatic (non-aromatic) compounds, typically produced by epoxidizing aliphatic olefins or glycidylating aliphatic alcohols, resulting in resins with excellent UV resistance, low viscosity, and superior weatherability compared to aromatic epoxies; they are widely used in coatings, adhesives, electronics encapsulation, and composite materials where color stability and outdoor durability are critical. The supply chain begins with upstream petrochemical or bio-based feedstocks such as propylene, glycerol, or aliphatic diols, which are converted into intermediates like epichlorohydrin and aliphatic glycols, followed by chemical synthesis (e.g., epoxidation or glycidylation) by resin manufacturers (e.g., Huntsman Corporation, Olin Corporation, Aditya Birla Chemicals, Kukdo Chemical), then formulation by downstream compounders into tailored systems (with curing agents and additives), and finally distribution to end users in industries such as automotive coatings, wind energy composites, electrical insulation, construction sealants, and high-performance industrial coatings. In 2025, global Aliphatic Epoxy Resin output was about 1.6 million tons with 1.8 million tons of capacity, average prices of USD 2,200–4,000 per ton, and gross margins around 24%.
