## Abstracts

The global Aliphatic Isocyanate Prepolymer market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An isocyanate prepolymer is a type of polyurethane prepolymer in which all of the polyol hydroxyl end groups have reacted with isocyanate groups. The end result is a compound with isocyanate functionality at the termini instead of hydroxyls.

Aliphatic isocyanate prepolymer is a color-fast and UV-resistant polyurethane elastomer. Depending on whether it contains a benzene ring, isocyanates can generally be divided into aromatic isocyanates and aliphatic isocyanates. Aliphatic isocyanates are isocyanates where the NCO group is not directly attached to an aromatic ring. Aliphatic isocyanates produce UV stable, colorless and transparent polyurethane systems.
