According to our (Global Info Research) latest study, the global Aliphatic Polyisocyanate market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Aliphatic polyisocyanates are a class of polymers based on aliphatic isocyanates, which are widely used in coatings, adhesives, elastomers and other fields. It uses aliphatic isocyanates as the main raw materials, has excellent weather resistance, UV resistance and color stability, is not easy to yellow, and is particularly suitable for outdoor applications. Compared with aromatic polyisocyanates, aliphatic polyisocyanates are more suitable for surfaces that need to be exposed to light and weather conditions for a long time, and are widely used in high-performance fields such as automobiles, construction and industrial coatings.
