## Abstracts

According to our (Global Info Research) latest study, the global Alkyl Hydroperoxide market size was valued at US\$ 965 million in 2025 and is forecast to a readjusted size of US\$ 1340 million by 2032 with a CAGR of 4.8% during review period.

Alkyl hydroperoxide (ROOH) is an organic peroxide compound in which a hydroperoxy group ( $\text{-OOH}$ ) is bonded to an alkyl chain, making it a highly reactive intermediate widely used as an initiator, oxidizing agent, and intermediate in chemical synthesis (e.g., polymerization, epoxidation, and oxidation of hydrocarbons). Its supply chain begins upstream with petrochemical feedstocks such as alkanes, olefins, or alkyl aromatics (derived from crude oil/natural gas refining), along with oxygen or air as the oxidant; midstream production typically involves controlled autoxidation or catalytic oxidation processes (e.g., liquid-phase oxidation of isobutane to tert-butyl hydroperoxide), followed by purification, stabilization, and formulation due to safety and decomposition risks; downstream, alkyl hydroperoxides are supplied to industries such as polymer manufacturing (initiators for polyethylene, polypropylene), propylene oxide production (via TBHP route), fine chemicals, pharmaceuticals, and specialty oxidations, with strict handling, storage, and logistics requirements due to their thermal instability and hazardous nature. In 2025, global Alkyl Hydroperoxide output was about 700,000 tons with 1.1 million tons of capacity, average prices of USD 1,200-2,000 per ton, and gross margins around 24%.
