Abstracts

According to our (Global Info Research) latest study, the global Alkyl Nitrite market size was valued at US\$ 407 million in 2025 and is forecast to a readjusted size of US\$ 603 million by 2032 with a CAGR of 5.8% during review period.

Alkyl Nitrite refers to a family of organic compounds with the general formula RONO , where an alkyl group is bonded to a nitrite functional group. Common examples include amyl nitrite, butyl nitrite, isobutyl nitrite, and isopropyl nitrite. These compounds are volatile liquids characterized by vasodilating properties and are used in pharmaceutical applications, chemical synthesis, laboratory reagents, specialty solvents, and certain industrial processes. The supply chain begins with upstream raw materials such as alcohols (methanol, ethanol, propanol, butanol, amyl alcohols), sodium nitrite, nitrous acid precursors, and petrochemical feedstocks derived from crude oil and natural gas. Midstream manufacturing involves the nitrosation of corresponding alcohols under controlled reaction conditions, followed by purification, distillation, stabilization, quality testing, and packaging. Downstream sectors include pharmaceutical manufacturers, fine chemical producers, research laboratories, fragrance and specialty chemical companies, and industrial users requiring nitrite intermediates. The market is influenced by raw material availability, environmental and safety regulations concerning volatile organic compounds (VOCs), transportation requirements for hazardous chemicals, and demand from pharmaceutical and specialty chemical industries. In 2025, global Alkyl Nitrite output was about 180,000 tons with 220,000 tons of capacity, average prices of USD 2,000?5,000 per ton, and gross margins around 27%.
