## Abstracts

According to our (Global Info Research) latest study, the global Alkyl Polyglucosides (APG) Biosurfactants market size was valued at USD 465.2 million in 2023 and is forecast to a readjusted size of USD 666.2 million by 2030 with a CAGR of 5.3% during review period.

APG is a new type of non-ionic surfactant with more comprehensive performance. It has the characteristics of common non-ionic and anionic surfactants. Usually, industrial products are made into 50% and 70% aqueous solutions. The shape is usually colorless to Light yellow viscous liquid or milky white cream (winter). Pure APG is brown or amber flake solid, easy to absorb moisture. APG is generally soluble in water and is easily soluble in common organic solvents. It exhibits excellent compatibility, stability and surface activity in acid and alkaline solutions, especially in active solvents with high inorganic components. APG can be completely biodegraded in nature and will not form metabolites that are difficult to biodegrade, thus avoiding new pollution to the environment.

Due to environmental pollution caused by traditional energy?lots of consumers in some regions pay more attention to renewable resources.Especially in North America and Europe .People have to rely on this resource?which may change the trend of Biosurfactants development.Europe alkyl polyglucosides market has been the dominant region over the past few years,North America is likely to witness significant gains over the forecast period as the countries such as the U.S. and Canada,Asia Pacific APG biosurfactant market is cost sensitive and is likely to grow with increase in awareness about potential health hazards caused by synthetic surfactants.The global APG biosurfactants market share is moderately consolidated with companies competing on
