According to our (Global Info Research) latest study, the global All Electric Delivery Vehicles market size was valued at USD 196.5 million in 2022 and is forecast to a readjusted size of USD 1097.2 million by 2029 with a CAGR of 27.8% during review period.

The electric van runs on electric energy powered by the motor; the vehicle does not emit exhaust gas. The e-van consists of a large lithium-ion battery pack and a high-capacity motor for driving. The output from the lithium-ion battery is DC, but the drive motor of electric vehicles is an AC motor. Therefore, an inverter that converts the DC into three-phase AC must also be installed. Some electric vans have petrol engines and are referred to as hybrid vehicles. In a hybrid vehicle, the engine can be used to drive the vehicle when the battery charge is depleted, or the battery can be saved for town and city driving.
