All-flash, replaces traditional hard disk drives (HDDs) with solid state drives (SSDs) or other flash media in the storage subsystem. In a single script, all-flash arrays can deliver 500,000 to 1 million IOPS with latency of less than 1 millisecond. Hybrid storage is the use of flash-based solid state disks in combination with conventional disk drives. Hybrid storage uses flash memory as a cache for automatically moving the most active data into memory-based storage.
