Abstracts

The global All-in-One Air Conditioner market size is expected to reach \$ 724 million by 2032, rising at a market growth of 12.3% CAGR during the forecast period (2026-2032).

In 2025, global all-in-one air conditioner production reached approximately 389 k units, the average price is 800 usd/unit. An all-in-one air conditioner combines the compressor, condenser, evaporator, throttling element, and fan into a single enclosure, eliminating the need for separate indoor and outdoor units. Heat from the condenser side is exhausted through a short pipe on the back of the unit to the outside of a window or directly through a hole in the wall. Installation requires only one opening or window frame bracket. They are commonly found in rental properties, shops, computer rooms, and temporary locations. Compared to split units, they save on copper pipes and installation time, but are generally less noisy and less energy efficient. Portable models can be easily moved by adding casters and exhaust heat pipes, while window-type models are partially embedded in the window frame.

The gross profit margin of all-in-one air conditioner is around 26%.
