The global All In Two Solar Street Light market size is expected to reach \$ 1328 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global All In Two Solar Street Light production reached approximately 2,130 k units?with an average global market price of around US\$ 410 per unit, and a gross profit margin of approximately 20%-40%. All In Two Solar Street Lights are solar-powered outdoor lighting systems that usually combine the LED lamp, battery, controller, sensor, and lighting module into one lamp body, while the solar panel is installed separately for better sunlight exposure. They are widely used in roads, residential communities, industrial parks, rural areas, parking lots, campuses, gardens, public squares, and off-grid lighting projects. Compared with traditional grid-powered street lights, they reduce wiring costs, save electricity, improve installation flexibility, and support independent operation in areas without stable grid access. Compared with all-in-one designs, the separated solar panel can offer better charging efficiency and easier installation angle adjustment. The industrial chain of All In Two Solar Street Lights includes upstream solar panels, LED chips, lithium batteries, charge controllers, sensors, aluminum housings, poles, cables, lenses, brackets, fasteners, PCBs, and packaging materials. The midstream includes product design, lighting structure integration, battery management, solar charging system matching, optical design, waterproof testing, assembly, aging tests, quality control, and certification. Downstream applications include municipal road lighting, rural road lighting, residential areas, industrial zones, commercial parks, schools, parks, scenic areas, parking lots, and off-grid infrastructure projects. Related services include lighting design, installation guidance, project commissioning, maintenance, battery replacement, spare parts supply, and after-sales support.
