Abstracts

The global Allergy Immunotherapies market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

Allergen immunotherapy, also known as desensitization or hypo-sensitization, is a medical treatment for some types of allergies. It is useful for environmental allergies, allergies to insect bites, and asthma. Its benefit for food allergies is unclear and thus not recommended. Immunotherapy involves exposing people to larger and larger amounts of allergen in an attempt to change the immune system's response.

The primary therapeutic goals of allergy immunotherapy (AIT) include reducing symptoms, reducing symptomatic medication use, and improving allergy-related quality of life. The evidence is strong that AIT achieves these goals and can alter the course of the disease, with benefits persisting in many patients for several years after treatment discontinuation.

In Southeast Asia Allergy Immunotherapies key players include ALK, Stallergenes, etc. Southeast Asia top two manufacturers hold a share about 65%.

Singapore is the largest market, with a share over 30%, followed by Thailand and Malaysia, both have a share about 35 percent.

In terms of product, Subcutaneous Immunotherapy is the largest segment, with a share about 43%. And in terms of application, the largest application is Allergic Rhinitis, followed by Allergic Asthma, etc.
