## Abstracts

According to our (Global Info Research) latest study, the global Allergy Immunotherapies market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Allergen immunotherapy, also known as desensitization or hypo-sensitization, is a medical treatment for some types of allergies. It is useful for environmental allergies, allergies to insect bites, and asthma. Its benefit for food allergies is unclear and thus not recommended. Immunotherapy involves exposing people to larger and larger amounts of allergen in an attempt to change the immune system's response.

The primary therapeutic goals of allergy immunotherapy (AIT) include reducing symptoms, reducing symptomatic medication use, and improving allergyrelated quality of life. The evidence is strong that AIT achieves these goals and can alter the course of the disease, with benefits persisting in many patients for several years after treatment discontinuation.

In Southeast Asia Allergy Immunotherapies key players include ALK, Stallergenes, etc. Southeast Asia top two manufacturers hold a share about 65%.

Singapore is the largest market, with a share over 30%, followed by Thailand and Malaysia, both have a share about 35 percent.
