Allochroic silica gel desiccant? is a special desiccant that changes color as it absorbs moisture. Allochroic silica gel desiccant is mainly made of fine-pored silica gel, which is a hygroscopic material with silicon dioxide as the main component. The humidity indication function is achieved by adding a color developer (such as cobalt chloride). The color changes after moisture absorption (such as blue to red), which directly reflects the humidity status of the environment. With its humidity indication function, the demand for allochroic silica gel desiccant in the electronics, medicine and food fields has been steadily growing.
