Abstracts

According to our (Global Info Research) latest study, the global Alloy Lightweight Shock Absorber market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Alloy lightweight shock absorbers are a component of a car's shock absorbing system. They are used to reduce vibrations and bumps caused by uneven road surfaces during driving, and improve the stability and comfort of the vehicle. Compared with traditional steel shock absorbers, alloy lightweight shock absorbers are made of lightweight alloy materials, which have higher strength and corrosion resistance while being lighter in weight. Alloy lightweight shock absorbers usually include components such as the shock absorber body, springs, shock absorbing oil and damping valves. When the vehicle is driving, the shock absorber absorbs and dissipates the impact force on the vehicle through the flow of damping oil and the adjustment of the damping valve, thereby reducing the vibration and bumps of the vehicle body and improving driving comfort and stability. Because alloy lightweight shock absorbers are made of lightweight alloy materials, they have the advantages of light weight, high strength, and good corrosion resistance. It is widely used in various car types, including passenger cars, commercial vehicles, racing cars, etc., and is an important component in improving the performance of car suspension systems.
