The global Alloy Molybdenum Slab market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Alloy molybdenum slab is a molybdenum alloy material containing a certain proportion of other metal elements, usually prepared by powder metallurgy. Alloy molybdenum slabs can be used to make molybdenum discs, molybdenum plates, molybdenum foils, etc., and have the advantages of high strength, high hardness, high melting point, and high corrosion resistance. Common alloy elements of molybdenum alloy slabs include tungsten, niobium, tantalum, titanium, zirconium, etc. The rolling process of alloy molybdenum slab includes hot rolling and cold rolling. Hot rolling is rolling at high temperature, and cold rolling is rolling at room temperature. The difference between hot rolling and cold rolling mainly lies in rolling temperature, deformation amount, structural properties, etc.
