In terms of downstream industries, the automotive industry is the top application area with 23% market share; in addition, the batteries and components, and power industry are also important applications.

Alloy resistor is a kind of resistor using alloy as current medium, which generally has the characteristics of low resistance, high precision, low temperature coefficient, resistance to inrush current, high power, etc. Alloy resistors generally have low resistance values such as 1 milliohm, 10 milliohm, 100 milliohm, etc. due to the strong conductivity of the metal. It is used to feedback the changing current in the circuit in order to further control or influence the change of current. Mainly used in products such as: battery protection board, power supply class, inverter, lamps, motors, etc.
