The global Alodine Surface Finishing market size is expected to reach \$ 5144.9 million by 2030, rising at a market growth of 5.2% CAGR during the forecast period (2024-2030).

Alodine surface finishing is a chemical process used to treat aluminum and other metals to improve their corrosion resistance and adhesion properties. It involves the application of a conversion coating that creates a thin, protective layer on the metal surface. This coating not only enhances the metal's resistance to corrosion but also provides a surface that is conducive to painting or bonding with adhesives. Alodine surface finishing is commonly used in aerospace, automotive, and other industries where metal parts are exposed to harsh environments.
