Abstracts

The global Alpha Bisabolol market size is expected to reach \$ 309 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032). In 2025, global production of Alpha-Bisabolol reached 5,800 tons, with an average selling price of USD 28,000 per ton, total production capacity of 6,900 tons, and a gross margin of 40%.

Alpha-Bisabolol is a naturally occurring monocyclic sesquiterpene alcohol found in plants such as chamomile. It is well known for its soothing, anti-inflammatory, anti-irritation, and skin-repair properties, and is widely used in skincare products, personal care formulations, and pharmaceutical preparations. Depending on its origin, it can be classified into natural and synthetic types, with natural Alpha-Bisabolol being more widely adopted in premium and sensitive-skin applications due to its mildness and safety profile.

The global Alpha-Bisabolol market is relatively niche but characterized by high value-added products, with downstream demand mainly driven by the cosmetics and personal care industry, particularly soothing and repairing skincare, baby care, and functional cosmetic products. Europe maintains strong advantages in natural Alpha-Bisabolol in terms of technology and branding, while Asia-Pacific has become a key region for demand growth and capacity expansion due to rapidly growing cosmetics consumption and local raw material supply. Overall, the market shows a clear structure in which natural Alpha-Bisabolol commands a price premium, while synthetic products dominate large-scale supply. With the continued expansion of functional skincare and sensitive-skin segments, long-term demand for Alpha-Bisabolol is expected to remain stable and growing.

This report studies the global Alpha Bisabolol production, demand, key manufacturers, and key regions.
