## Abstracts

The global Alternative Aquaculture Feeds market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market for alternative aquaculture feeds is growing due to several factors. First, the rising demand for seafood has put pressure on the traditional sources of fishmeal and fish oil, which are finite resources. Second, the increasing awareness of sustainability and the environmental impact of aquaculture has led to a search for more eco-friendly and cost-effective alternatives to traditional feeds. Finally, the development of new technologies and feed formulations has made it possible to create feeds with high nutritional value that can promote the growth and health of farmed fish. The use of alternative aquaculture feeds is expected to continue to grow in the coming years as the demand for sustainable seafood continues to increase. However, the market is also subject to challenges, such as the need to develop new feed formulations that can provide optimal nutrition for different fish species and life stages, as well as regulatory constraints on the use of certain ingredients in fish feed.

Alternative aquaculture feeds are a type of feed used in fish farming that is not based on traditional ingredients like fishmeal and fish oil. These feeds can be made from a variety of sources, such as plant proteins, algae, insects, and microbial biomass.

This report studies the global Alternative Aquaculture Feeds production, demand, key manufacturers, and key regions.
