Abstracts

The global Altitude Encoder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An altitude encoder is a device that measures the altitude of an aircraft and provides information to the autopilot system to keep it at the desired altitude. The encoder consists of a sensor that measures the air pressure around the aircraft and a processor that calculates altitude from the pressure. Encoders are usually mounted on the outside of the aircraft, and the information it provides is used by the autopilot to control the altitude of the aircraft.
