## Abstracts

According to our (Global Info Research) latest study, the global Alumina Coated Films market size was valued at US\$ 1608 million in 2025 and is forecast to a readjusted size of US\$ 2873 million by 2032 with a CAGR of 8.6% during review period.

Alumina coated films are specialty products consisting of a flexible polymer base layered with a highly thin, functional coating of aluminum oxide (alumina). These films are prized for their exceptional dielectric strength, heat resistance, and impermeability to moisture, making them essential for high-tech electronics and specialized packaging. In 2025, global alumina coated films production reached approximately 55,828 ton, with an average global market price of around USD 28,000 per ton. A factory gross profit of USD 8,400 per ton with 30% gross margin. A single line full machine capacity production is around 500 ton per line per year. The upstream is dependent on HPA powder, binder materials and base substrate. The downstream demand is concentrated in lithium ion battery, flexible packaging and specialty application. Lithium ion battery separator for EV cells uses HPA coated separator for thermal stability and prevent lithium dendrite puncture. China market is driven by large EV manufacturing and strong government support. South Korea market is driven by strong domestic battery industry.
